<sup>a</sup>LSD (P<0.30) 3.8

<sup>a</sup>If the difference between two variety yields equals or exceeds the LSD value, there is a 70% chance the difference is significant. Variety yields in bold are in the top LSD group.

**Site Information**

Cooperator: Stulp Farms  
Harvest date: June 28, 2018  
Planting date: September 21, 2017

Trial Comments: Planted into marginal moisture, trial received over an inch of rain from showers in the days immediately after planting. Good stand establishment and a lot of fall growth. Winter was dry and trial received minimal moisture in March and April. In early May the soil was dry through the top portion of the root zone, but plants were not showing drought stress symptoms. Growth was very uniform and lush. No disease issues noted. Very little rain from May through harvest, although trial received small amount (<10%) of hail damage a week before harvest.
